Dear Sir

WATER SAMPLE FOR ANALYSIS – PISA FLATS

Enclosed are the results of an analysis of water taken from the water supply of the Pigeon Rock Water Supply on 21 January 2016.

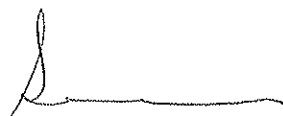

The sample was collected from the outside tap of the dwelling located at 124 Cornish Point Road and was labelled as "Pigeon Rock".

Bacteriological Test

The sample collected had an **E.coli count of <1 1MPN/100mls**. The result indicated that the supply was of satisfactory bacteriological standard for drinking water at the time of collection.

If you have any further enquires, please do not hesitate to contact the undersigned.

Yours faithfully

Sue de Jong
Administration Officer, Planning & Environment

Sample Type: Aqueous	
Sample Name:	Pigeon Rock 21-Jan-2016 10:45 am
Lab Number:	1527840.1
Escherichia coli	MPN / 100mL < 1

SUMMARY OF METHODS

The following table(s) gives a brief description of the methods used to conduct the analyses for this job. The detection limits given below are those attainable in a relatively clean matrix. Detection limits may be higher for individual samples should insufficient sample be available, or if the matrix requires that dilutions be performed during analysis.

Sample Type: Aqueous			
Test	Method Description	Default Detection Limit	Sample No
Escherichia coli	MPN count using Colilert (Incubated at 35°C for 24 hours), or Colilert 18 (Incubated at 35°C for 18 hours), Analysed at Hill Laboratories - Microbiology; 101c Waterloo Road, Hornby, Christchurch, APHA 9223 B, 22 nd ed. 2012.	1 MPN / 100mL	1-2

These samples were collected by yourselves (or your agent) and analysed as received at the laboratory.

Samples are held at the laboratory after reporting for a length of time depending on the preservation used and the stability of the analytes being tested. Once the storage period is completed the samples are discarded unless otherwise advised by the client.

This report must not be reproduced, except in full, without the written consent of the signatory.
